## Bringing it All Together:

With a partner, come up with your own company. First, determine the total monthly salary of your management. Next, determine the cost of your hourly employees. Then decide on the market price of the merchandise you are selling. Place these numbers in the appropriate boxes below. Finally, compute the marginal cost, quantity produced, marginal product of labor, total revenue, and the profit. Show your work below.

Company: $\qquad$ Merchandise: $\qquad$

| Workers | Fixed Cost | Variable Cost | Total cost <br> (Fixed cost <br> + variable <br> costs) | Marginal Cost | Marginal <br> Revenue (market price) | Quantity <br> Produced | Marginal <br> Product of Labor | Total Revenue $(M R \times Q)$ | Profit (total revenue total cost) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 |  |  |  |  |  |  |  |  |  |
| 1 |  |  |  |  |  |  |  |  |  |
| 2 |  |  |  |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |  |  |  |
| 4 |  |  |  |  |  |  |  |  |  |
| 5 |  |  |  |  |  |  |  |  |  |

What is the profit at 2 workers? $\qquad$ .

What is the profit at 3 workers? $\qquad$ .

How many workers should we hire? $\qquad$ .

At how many workers does our company reach before the point of diminishing marginal return? $\qquad$ .
